

Personal information

Surname(s) / First name(s)	Shafeyev, Roman
Address(es)	18/2 f.345 European avenue, Kudrovo, Leningrad region, Russia
Telephone(s)	Skype ID: roma.shafeyev Mobile: +7 965 078 43 30
Email(s)	roman.shafeyev@gmail.com
Nationality(-ies)	Russian
Date of birth	Feb 14 1990
Gender	male

Work experience

Date	June 2017 – Now
Occupation or position held	Insurance Telematics Project Manager, StarLine, Saint-Petersburg, Russia
Date	July 2015 – June 2017
Occupation or position held	C++/Python Server Developer, StarLine, Saint-Petersburg, Russia
Date	September 2012 – June 2015
Occupation or position held	Researcher of the Department of Computer Mathematics and Mathematical Modeling, NTU "KhPI", Ukraine
Date	July 2011 – February 2012
Occupation or position held	Researcher of Hamburg University of Technology-TUHH", Germany

Education and training

Place and Date	National Technical University "Kharkov Polytechnic Institute", Ukraine, 2013 – 2016
Specialty	Mathematical modeling and computational methods
Title of qualification awarded	passed PhD minimum, successful completion of postgraduate study
Thesis theme	Development of mathematical models and methods to solve the Dynamic Vehicle Routing Problem with uncertain input parameters
Place and Date	National Technical University "Kharkov Polytechnic Institute", Ukraine
	Computer Mathematics and Mathematical Modeling department, 2011 – 2013
Title of qualification awarded	Master's degree in Applied Mathematics with excellence
Place and Date	National Technical University "Kharkov Polytechnic Institute", Ukraine
	Computer Mathematics and Mathematical Modeling department, 2007 – 2011
Title of qualification awarded	Bachelor's degree in Applied Mathematics with excellence
Principal subjects covered	Mathematical Analysis Discrete Mathematics Programming (C,C++) Probability Theory and Mathematical Statistics Object Oriented Programming

Personal skills and competences

Mother tongue(s)

Other language(s)

*Self-assessment
European level^(*)*

English

Computer skills and competences

Numerical Methods
Optimization Methods
Logical Algorithms and Artificial Intelligence Systems
Control Theory
Development of Information Systems (Java, IDEF, Web 2.0)
Computer Simulation
Distributed Information Systems(Oracle)
Actuarial Mathematics

Russian

English

Understanding		Speaking		Writing
Listening	Reading	Spoken interaction	Spoken production	
B1 Independent user	C1 Proficient user	B2 Independent user	B2 Independent user	B2 Independent user

^(*) Common European Framework of Reference (CEF) level

Operating System Experiences

- Linux (Debian, Ubuntu /Ubuntu Server), MS Windows

Programming Languages

- C/C++, Java, Python(Tornado, scripts), C#, Ruby(basic level), SQL, PL/pgSQL

Web-based technologies

- HTML, JavaScript, EmberJS, ASP.NET MVC, Spring MVC, JSP/FreeMarker, Hibernate, Ruby on Rails 4, Tornado

Continuous integration tools

- Maven, Jenkins CI, Gitlab CI, Capistrano, Ansible

Development tools

- IntelliJ Idea, Eclipse, RubyMine, PyCharm, CLion, QT Creator, MS Visual Studio 2012

Database Management Systems

- PostgreSQL, Oracle, Redis, MySQL

Version Control Systems

- Git, SVN

Other skills

- MicroServices: Event-driven architecture(RabbitMQ impl)
- Mathematics: MatLab, Mathcad, R Studio
- Simulation: Rational Rose, GPSSW, Anylogic
- Graphics: OpenGL(+shaders)

Additional information

GRANTS

Grant of Government of Ukraine, 2010–2011.

Grant of the “DAAD-East European Partnership Exchange” funding framework between “National Technical University” (Kharkov, Ukraine) and “Hamburg University of Technology-TUHH” (Germany). During the internship, I worked as a team member, which developed Supply Chain Management project, Hamburg (Germany), July – October 2011.

SOURCE CODE

Source code, demonstration video and documentation of my projects:

PROJECT EXPERIENCE

Insurance Telematics

(July 2016 – Now)

Used technologies and tools

- Basic: C++, POOCO, CMake, STL, RMQ, Redis, MySQL, Oracle, Python, Tornado, SQLAlchemy

Description

StarLine Insurance Telematics Project is consists of two parts: The Development of WebAPI tools for intagrations with Telematics Providers and Insurance Partners; The Development of Software Solutions for cross-server Retransmission Telematics Data in real time mode.

PROJECT EXPERIENCE

SLNET – TCP/IP Server for interaction with telematics devices.

(July 2015 – Now)

Used technologies and tools

- Basic: C++, POOCO, CMake, STL, libevent, RMQ, Redis, MySQL, Oracle

Description

SLNET (StraLine Network) is a Asynchronous Nonblocking IO tcp/ip server for interaction with telematics devices.

OptSDK – Java-based framework for evolutionary computation.

(September 2014 – June 2015)

Used technologies and tools

- Basic: Java, IntelliJ Idea

Description

The goal of OptSDK is to simplify the evolutionary optimization of user-defined problems as well as the implementation of arbitrary metaheuristic optimization algorithms.

JLogistics – Vehicle Routing software framework (December 2013 – Now)

Used technologies and tools

- Basic: Java, IntelliJ Idea

- Web: Spring MVC, JSP/FreeMarker

Description

JLogistics is a vehicle routing software framework for Java that uses specialized metaheuristic algorithms to calculate an optimal solution of the different classes of the static and dynamic vehicle routing problems.

An application for computing the optimal productive supply of the power transformers in Dushanbe (Tajikistan).(September 2012 – March 2013)

Used technologies and tools

- Basic: Matlab

Description

The developed application allows to find the best productive supply for each transformer with minimal losses on the transformers.

Supply Chain Building Blocks (July 2011 – February 2012)

Used technologies and tools

- Basic: Java, Anylogic 6.6

- Routes building for transport agents: C++, WinAPI/MFC, Visual Studio 2008, OSM

- Database: Microsoft Excel (with macros), Microsoft Access

Description

The modeling platform follows a rigorous development process framework, where model validity is ensured by using Supply Chain Operations Reference as theoretical process framework. An agent based simulation platform is presented for generic supply chain modeling adding flexibility and configurability over existing models.

Numerical simulation of the motion of celestial bodies(October 2009–July 2010)*Used technologies and tools*

- Basic: C++, WinAPI/MFC, Visual Studio 2008
- Database: MS SQL Server 2008 Express
- Graphics: OpenGL

Description

The scientific software is for the numerical decision of the research problem of celestial bodies movement processes, visualization in three-dimensional space of modeling process, as well as processing, ordering and classification of the received orbital data. The main project objective was to define potentially dangerous for the Earth asteroids from the Aton's group and create the catalog of orbital evolution for them on a time interval from 2009 to 2200.

Navigation GIS (October 2009 – July 2010)*Used technologies and tools*

- Basic: C++, WinAPI/MFC, Visual Studio 2008
- Database: PostgreSQL
- Network: TCP/IP sockets
- Render map: OpenStreetMap, Google Maps API

Description

The client-server system was used for vehicle movement monitoring in real time (Student project).

Terrain Generator (September 2008 – January 2009)*Used technologies and tools*

- Basic: C++, WinAPI/MFC, Visual Studio 2008
- Graphics: OpenGL, shaders

Description

This application is the generator of three-dimensional landscapes (Student project).
